To whom it may concern  
[REDACTED]

Dear Sir,

[REDACTED]  
[REDACTED] complained discharge from left ear since [REDACTED]  
I saw him today as he still has discharge from left ear and ear pain after taking oral augmentin from the Paediatrician.  
Physical examination today showed intact right eardrum. The left external ear canal was blocked with debris and dry crust due to the discharge. Ear toilet by suction was done. There was acute otitis media in left ear with perforation of the left eardrum.  
I have advised her to continue the oral antibiotic from his Paediatrician Sofradex eardrops 3 drops tds to left ear for 1 week was prescribed. Water precaution was advised.  
I will see him in 2 weeks.

Yours sincerely,

*YHL*
